

2.4.0

JVM

```
fun main() {  
    printFinalTemperature(27.0, "Celsius", "Fahrenheit") { celsius  
        (9.0 / 5.0) * celsius + 32  
    }  
    printFinalTemperature(350.0, "Kelvin", "Celsius") { kelvin ->  
        kelvin - 273.15  
    }  
    printFinalTemperature(10.0, "Fahrenheit", "Kelvin") { fahrenheit  
        (5.0 / 9.0) * (fahrenheit - 32) + 273.15  
    }  
}  
  
fun printFinalTemperature(  
    initialMeasurement: Double,  
    initialUnit: String,  
    finalUnit: String,  
    conversionFormula: (Double) -> Double  
) {  
    val finalMeasurement = String.format("%.2f", conversionFormula  
    println("$initialMeasurement degrees $initialUnit is $finalMea  
}
```

27.0 degrees Celsius is 80.60 degrees Fahrenheit.
350.0 degrees Kelvin is 76.85 degrees Celsius.
10.0 degrees Fahrenheit is 260.93 degrees Kelvin.
